Hello, this is the feedback that we found when reviewing your domain model, on order of Tobias we will only review your grade 2 model:

- First and foremost, you have included treasurer, Treasurer is NOT included in the assignment instructions and should not have been on the domain model at all.

  Reference:
  http://coursepress.lnu.se/kurs/objektorienterad-analys-och-design-med-uml/workshops-2/workshop-1-domain-modeling/ Read the Instructions for grade 2.

- Is it necessary to show that *"member"* will *"browse"* the calendar we think that you might have thought a little too much programming, might want to look at the smartboard notes, (Page 10).

  Reference: School material / Lecture "Think mapmaker NOT software http://coursepress.lnu.se/kurs/objektorienterad-analys-och-design-med-uml/lectures/domain-modeling/ Smartboard notes

We think that the model at the moment might pass grade 2, but if you change according to feedback we are almost certain that it will pass with no problems at all.

Your model was very easy to understand from the start, We think that there will be no problems for eigther a Domain Expert or a programmer to understand it fully.
